Xen 4.0 released
Posted by maurs - 2010/05/24 13:11

_____

Xen 4.0 was released.
http://blog.xen.org/index.php/2010/04/13/xen-org-announces-xen-4-0-availability/

There are a few of interesting features for VDD-Project

* New Linux pvops dom0: vanilla kernel (from 2.6.31) can be used either for domU and dom0.
* Paravirtual high-performance USB passthru to both PV and HVM guests, supporting USB 2.0 devices.
* Online resize of guest disks without reboot/shutdown.

_____

I've just upgraded XEN to version 4.0.0 but unfortunately I bumped into a bridge problem.

/etc/xen/scripts/network-bridge: line 118: sigerr: command not found

That's what happens when the xend daemon tries to start. The problem is that, the xenbr0 bridge doesn't come up automatically and that's why xen 4 gives me these problems.

Somebody knows how to fix it?

I don't think it's a configuration related issue, because it seems nothing has changed, but you never know...
